Monitoring Tracker

User stories by role

Staff, project leads, admin, executive PA and executive, for MacWest, CypressEnergy and Northbrook LRD.

Version	1.0, 31 October 2026
Prepared by	Aziz, developer
Basis	29 October ideation meeting (Mr Blay's office), the written ECAS brief, and the system as built and tested on 31 October
Scope	The web app as it stands, plus the mobile app planned after the demo and Mr Blay's approval

How to read this

Each story follows the pattern As a role, I want something, so that a reason, with the conditions that make it done. The status column says whether the story is **built** in the web app today, or **planned** for the mobile app. Story IDs (S-, L-, A-, P-, E-) are stable, so they can be referenced in feedback and sign-off.

1. What the system is for

The Monitoring Tracker is the project management system for the three companies. Every project and task lives here, each person sees their own company, and a global view lets Mr Blay see all three at a glance. MacWest's project data arrives automatically from Baserow; CypressEnergy and Northbrook enter work directly.

The accountability add-on agreed on 29 October takes day-to-day chasing off Mr Blay. Instead of calling each leader, he gets one short brief, prepared and filtered by his PA, and steps in only when something needs him.

The loop, in order

1	Mr Blay gives an instruction, usually a voice note to his PA.
2	The PA turns it into tasks with owners, deadlines and a date for the next update.
3	The owner is notified and accepts the task.
4	Every status change carries a short update. Blocked names who it is waiting on. Done carries proof.
5	The assigner and the PA are told of every movement; anyone named as a blocker is told too.
6	Each morning the PA selects what matters, adds a line in their own words, and Mr Blay reads it, usually on his phone, in a 15 to 30 minute briefing.

2. Roles at a glance

Role	Who	Sees	Can do
Staff	Site engineers, officers, specialists	Their company's projects and tasks; opens on their own tasks	Accept, update and move their tasks with an update; add proof; tick steps; comment
Project lead	Leads per company (e.g. Sarah Mensah, Esi Amartey)	Everything in their company	All of the above, plus create, assign and reschedule tasks; request and approve project stage changes
Admin	System owner	All companies	Everything, plus invite people, set roles, manage projects and imports
Executive PA	Mr Blay's PA	All companies	Create and chase tasks in any company; prepare the morning brief; receives every movement
Executive	Mr Blay	All companies, read-only	Read his brief and the full picture; open any task; leave an optional note. Cannot move or edit tasks

3. Task statuses and the rules for moving

A move is never just a drag. Whether a card is dragged, moved from the **Update status** menu or changed in the task panel, the same sheet opens. It shows where the task is now and where it is going, asks for the update that move needs, and confirms when it is saved. The update and any proof are kept in the task's history.

Status	Means	Moving here asks for
Yet to start	Assigned; work has not begun	Why it is going back (when moved back from later stages)
In progress	Being worked on	What is being done now, and how far along: 25, 50 or 75%
Blocked	Stopped, waiting on someone or something	The reason, and who it is waiting on (they are notified)
Done	Finished. The last stage	What was delivered, and proof: a photo, file or link. Refused without proof, by the database as well as the app

Rules that apply to every task

- A task in progress that has not moved for more than two days is flagged **Stuck**. Staleness is worked out when read, never stored, so silence cannot be recorded as progress.
- A task with an owner who has not accepted it is flagged **Not accepted**. Starting work on it counts as accepting.
- A promised next-update date that passes is flagged **Update overdue**.
- **Urgent** is shown in red everywhere and always reaches Mr Blay's brief, whatever the PA selects.
- Moving to Done sets progress to 100%. Moving back from Done reopens it at 75%.
- "Talking stage" is pre-assignment pipeline. It appears only when something is in it and is not a target for moves.

4. User stories

Grouped by role. A person with a higher role can also do what the roles before them can, except where a story says otherwise. The executive is deliberately read-only.

4.1 Staff

Site engineers, officers and specialists who do the work. They mostly use a phone on site.

ID	Story and done when	Status
S-01	As a new staff member, I want to join from an invite link and set my own password, so that nobody else handles my login. – The link opens a sign-up page with my name, email, role and company filled in from the invite – The link expires after 7 days	Built
S-02	As staff, I want the task board to open on my own tasks, so that I see what is mine without searching. – “My tasks” is on by default for staff and can be switched off – Search finds tasks by title, project or person, from the header or the board	Built
S-03	As staff, I want to accept a task in one tap, so that the person who assigned it knows I have taken it on. – “Accept this task” appears only to the owner – Starting the task also counts as accepting – The assigner and the PA are notified	Built
S-04	As staff, I want to move a task to In progress with what I am starting and how far along it is, so that progress is visible as 25, 50 or 75%, not just “in progress”. – The update sheet opens on drag or from “Update status” – The note is required; the percentage defaults sensibly – Nothing moves until I confirm, and I see “Moved to In progress” and the highlighted card	Built
S-05	As staff, I want to post a progress update without changing the status, so that my task never sits still for more than two days. – “Post an update” is in the card menu and the task panel – An in-progress task with no movement for 2+ days shows “No movement for N days”	Built
S-06	As staff, I want to mark a task blocked with the reason and who I am waiting on, so that it is clear who is delaying it. – The reason is required; the person is chosen from my company or “someone outside the team” – That person, the assigner and the PA are notified – The card shows “Waiting on name: reason”	Built
S-07	As staff, I want to mark a task done with what was delivered and proof, so that finished work can be trusted without a phone call. – Proof is at least one photo, file (up to 10 MB) or link – Done is refused without proof, and the reason is shown – A warning shows if steps are still unticked – Progress becomes 100%	Built

ID	Story and done when	Status
S-08	As staff, I want to tick off and add steps on a task, so that large tasks move visibly. – Steps show “4 of 6 done” and a bar; codes from Baserow (e.g. A1220) are shown as small tags	Built
S-09	As staff, I want to see the full history of a task, so that I know what was agreed and what proof was given. – Every status change shows who, when, from and to, the note and the proof; comments and Mr Blay’s notes appear in the same feed – Proof files open through a private, short-lived link	Built
S-10	As staff, I want to be notified when something concerns me, so that I do not miss work. – Under the bell: assigned to me, comments on my task, Mr Blay’s notes, and tasks waiting on me – Tapping a notification opens the task	Built (web) Push: planned
S-11	As staff, I want to keep my name and phone number up to date, so that my lead and the PA can reach me. – Settings saves name and phone; role and company are set by an admin	Built
S-12	As staff on a phone, I want one stage at a time with a clear “Update status” button, so that I can update from site without dragging. – Stage tabs with counts; after a move the view follows the task to its new stage	Built (web) Native: planned

4.2 Project lead

The lead for each company. Plans the work, assigns it, and answers for it.

ID	Story and done when	Status
L-01	As a project lead, I want to create a task with an owner, deadline, priority and steps, so that the work is clear before it starts. – New Task on the board and in a project – The owner is notified on creation	Built
L-02	As a project lead, I want to reassign a task, change its deadline or move it to another project, so that plans can change without losing history. – Owner, deadline and project are editable in the task panel by leads, the PA and admin only	Built
L-03	As a project lead, I want to set when the next update is due, so that silence is caught on time. – A missed date shows “Update overdue” on the card and in the brief	Built
L-04	As a project lead, I want to be told whenever a task I assigned moves, is blocked, changes progress or is accepted, so that I do not have to ask.	Built
L-05	As a project lead, I want to see every task in my company and filter to the ones I own, so that I can review my team in one place. – Board and list views; urgent first, then nearest deadline	Built
L-06	As a project lead, I want to mark a task urgent, so that emergencies are red for everyone and reach Mr Blay.	Built
L-07	As a project lead, I want to request a change of project stage, so that transitions are approved, not assumed. – “Update Stage” on a project creates an approval request	Built
L-08	As a project lead, I want to approve or decline requests, so that decisions are recorded. – Approvals lists pending requests; Review, then Approve or Decline	Built
L-09	As a project lead, I want to see a project’s budget, contract value, milestones, timeline, files, comments and activity, so that I manage delivery and cost together. – Files upload to a private store (up to 25 MB each); no placeholder files are ever shown	Built
L-10	As a project lead, I want a dashboard of where the work is, so that I see risk before it lands. – Status bar across stages, the items needing attention, approvals, recent activity, and projects with the most open work	Built

4.3 Admin

Runs the system: people, companies, projects and data.

ID	Story and done when	Status
A-01	As an admin, I want to invite a person with their role and company, so that they can sign in with the right access. – One option per real role: staff, project lead, admin, executive PA, executive – The form says which field is missing – The invite link can be copied and resent from the pending list	Built
A-02	As an admin, I want to change a person's role or restore their access, so that access matches their job.	Built
A-03	As an admin, I want to create, import, edit and archive projects, so that the project list stays current.	Built
A-04	As an admin, I want MacWest's Baserow data to sync automatically, so that MacWest keeps working where its data already lives. – Projects, tasks, steps and people sync every two hours – Accountability fields (progress, acceptance, updates, proof) are never overwritten by the sync – Open decision: whether deadlines and stages on MacWest tasks are owned here or in Baserow	Built
A-05	As an admin, I want to switch between one company and all companies, so that I can support any team.	Built
A-06	As an admin, I want analytics on task stages, financial realisation and team performance, so that the group can be reviewed over time.	Built
A-07	As an admin, I want a settings page that only shows settings that work, so that nobody is misled. – Profile, appearance, what you are notified about, companies, and a plain note on backups	Built

4.4 Executive PA

Mr Blay's eyes and ears. Turns his instructions into tasks, chases them, and filters what reaches him.

ID	Story and done when	Status
P-01	As the PA, I want to see and work across all three companies, so that I can coordinate the whole group.	Built
P-02	As the PA, I want to turn Mr Blay's instruction into tasks with owners and dates in any company, so that nothing he asks for is lost.	Built
P-03	As the PA, I want to be told of every movement on every task, so that I can brief him without calling round.	Built (web) Push: planned
P-04	As the PA, I want to post updates, move tasks and record blockers in any company, so that I can chase on his behalf.	Built
P-05	As the PA, I want a "Prepare today's brief" view of everything that needs attention, so that I start each morning from the facts. – Sections: urgent, blocked, stuck, overdue, not accepted, moved today, done – Counts and per-company figures beside the list	Built
P-06	As the PA, I want to add an item to Mr Blay's brief with one line in my own words, so that he gets the meaning, not the noise. – Tap + on an item, then type the line; it saves as I go – Preview shows exactly what he will see	Built
P-07	As the PA, I want Mr Blay's notes on tasks to reach me as well as the owner, so that I can follow up the same day.	Built
P-08	As the PA, I want to run a 15 to 30 minute briefing from the brief, so that he is informed enough not to step in.	Built
P-09	As the PA, I want Mr Blay's voice notes to arrive in the app, linked to the tasks I create from them, so that there is one record of what he asked.	Planned (mobile)

4.5 Executive

Mr Blay. Reads, decides, and nudges. He is never asked to manage the board.

ID	Story and done when	Status
E-01	As Mr Blay, I want to land on my brief when I open the app on my phone, so that I get my morning update in one place.	Built
E-02	As Mr Blay, I want to see only what my PA selected, with their line, grouped by company, so that I am not overwhelmed. – If today's brief is not ready, the most recent one is shown with its date	Built
E-03	As Mr Blay, I want urgent items to be shown whatever was selected, so that emergencies always reach me.	Built
E-04	As Mr Blay, I want to switch to the full picture when I want detail, so that I have access to everything without being burdened by it.	Built
E-05	As Mr Blay, I want to open any task and see its progress, history and proof, so that I can trust what I am told.	Built
E-06	As Mr Blay, I want to leave an optional note on a task, so that my comment can get it moving. – Shown as "Note from Mr Blay" in the task history – The owner, the assigner and the PA are notified straight away – Never required	Built
E-07	As Mr Blay, I want not to be able to move or edit tasks, so that the team stays accountable for its own updates. – Enforced by the database, not only hidden in the app	Built
E-08	As Mr Blay, I want to send a voice note from the app that goes to my PA, so that giving instructions is as easy as now.	Planned (mobile)
E-09	As Mr Blay, I want a morning notification when my brief is ready, so that I do not have to remember to check.	Planned (mobile)

5. Who is notified of what

Event	Owner	Assigner	PA	Named blocker
Task assigned or reassigned	**Yes**			
Task moved to another status		**Yes**	**Yes**	
Task marked blocked		**Yes**	**Yes**	**Yes**
Progress update		**Yes**	**Yes**	
Task accepted		**Yes**	**Yes**	
Comment	**Yes**	**Yes**		
Note from Mr Blay	**Yes**	**Yes**	**Yes**	

The person who causes an event is never notified of it. Changes made by the Baserow sync do not notify anyone. Today notifications appear under the bell in the app; phone and email alerts come with the mobile app.

6. The mobile app, after the demo and approval

The mobile app is built once Mr Blay approves the standard. It uses the same database, rules and permissions as the web app, so every story above behaves identically. Until then the web app is laid out to work on a phone.

Moves to the mobile app first

- Mr Blay: the brief, the full picture, opening tasks and leaving notes (E-01 to E-07), plus E-08 voice notes and E-09 the morning notification.
- Staff: my tasks, accept, update status with the camera for proof, and steps (S-02 to S-08), with push notifications (S-10).
- PA: notifications of every movement and preparing the brief on the go (P-03, P-05, P-06), plus P-09 voice notes.

Stays on the web

- Admin work: people, roles, projects, imports and settings.
- Planning work by leads: creating many tasks, the board across columns, analytics and approvals.

7. Open decisions

Decision	Why it matters	Who decides
Who owns deadlines and stages on MacWest tasks: the tracker or Baserow	Today a deadline changed here is put back by the next Baserow sync	Mr Blay’s office with MacWest
Moving the database to Supabase Pro at go-live (about $25 a month)	The free plan has no point-in-time restore and can pause when idle; the morning brief must be reliable	Client, at approval
Email or SMS alerts before the mobile app	Staff without the app open will not see the bell	Mr Blay’s office
Cleaning up MacWest’s past-due Baserow deadlines	Many old dates make the brief look worse than reality	MacWest leads with the PA
